PORTABLE "QUICK-ERECT" BUILDINGS

No Tools Required - No Air Supply Required

FIRETAK BUILDINGS are designed to be quickly erected wherever field use of an inexpensive temporary structure is required. Two people can erect most sizes within 20-30 minutes without the use of tools or air.

MATERIAL- A wide range of materials and colors are available. A typical building would have a white, 12 oz fire retardant rip-stop material, which has a 690 PSI burst strength and is ultra violet and mildew resistant. An important feature is that this particular material allows natural light to enter without creating shadows.

FRAME- The frame is one inch, 14 gauge galvanized steel, crimped for ease of installation. Each rafter can carry a dead load of over 200 lbs.

TIE DOWN SYSTEM- The cover and frame are connected by a ratchet tie down system. This eliminates stress points and keeps the cover tight, which adds to the life of the structure.

INCLUDES- Two gable vents, a window with velcro flap, a doorway, storage bags and detailed instructions.

OPTIONS- Extra doorways, windows, center curtains, room dividers, stove rings, signage, etc.

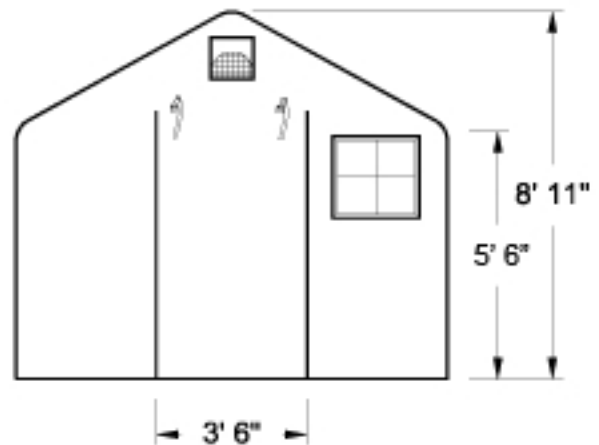

Window with Velcro Flap

Carrying Bag

THERE ARE MANY EMERGENCY SERVICE APPLICATIONS FOR THIS TYPE OF BUILDING

- ▲ Decontamination Facilities
- ▲ Military Operations
- ▲ Check Point Stations
- ▲ Washrooms
- ▲ Forestry Field Units
- ▲ First Aid Tents
- ▲ Security Offices
- ▲ Equipment Storage
